BUSINESS REQUIREMENTS DOCUMENT

People & Wellbeing Strategy 2026

Prepared by: Business Analyst | May 2026 | Version 1.0

Document Title	Business Requirements Document (BRD)
Project	Etheria People & Wellbeing Strategy 2026
Client	Etheria — Phygital Fashion-Tech Brand
Prepared By	Business Analyst
Date	May 2026
Version	1.0
Status	Draft
Reference	Etheria Client Brief v1.0

1. Purpose

This Business Requirements Document captures the requirements and expectations for the successful completion of Etheria People & Wellbeing Strategy 2026 project. It is based on the Client Brief and serves as the reference document for all analysis, dashboard, and reporting work. The goal of this project is to analyze employee wellbeing data, identify the root causes of burnout, and provide data-backed recommendations to the HR team.

2. Business Objectives

- Identify whether burnout is driven by working hours or lifestyle factors such as sleep and exercise
- Analyze how different work modes i.e., Remote, Hybrid, and Onsite, affect employee mental health
- Improve employee productivity and job satisfaction through data-backed recommendations
- Deliver a Power BI dashboard the HR team can use to monitor wellbeing KPIs

3. Stakeholders

Stakeholder	Role & Interest
HR Head	Primary client who wants insights and a clear strategy to reduce burnout
HR Executives	Day-to-day users of the Power BI dashboard
Department Managers	Will receive team-level recommendations and implement changes
Senior Management/CEO	Will review and approve the final People Strategy
Tech Employees	Their data is being analyzed — they benefit from improved policies
Business Analyst	Responsible for all analysis, documents, and deliverables

4. Scope

4.1 In Scope

- 100 tech employees across 7 countries — India, USA, UK, Canada, Australia, Germany, Brazil
- Work mode analysis — Remote, Hybrid, and Onsite
- Mental health status, burnout scores, and productivity ratings
- Lifestyle factors — sleep hours per day and exercise frequency
- Therapist access and its impact on mental health outcomes
- Remote infrastructure — internet issues and setup satisfaction
- Country-wise and job role-wise wellbeing trends

4.2 Out of Scope

- Financial performance, revenue, or sales metrics
- Customer behavior or marketing data
- Payroll, compensation, or recruitment analysis
- External factors not captured in the dataset

5. Functional Requirements

These are the specific things the solution must do to meet the project objectives:

FR ID	Requirement	Description	Priority
FR-01	Burnout Root Cause Analysis	Identify and compare whether burnout is driven by hours worked or lifestyle factors (sleep and exercise)	High
FR-02	Work Mode vs Mental Health	Compare mental health status and burnout scores across Remote, Hybrid, and Onsite employees	High
FR-03	Productivity Analysis	Compare average productivity and work-life balance ratings across the three work modes	High
FR-04	Job Role Analysis	Identify which job roles report the highest burnout and poorest mental health	High
FR-05	Country-wise Trends	Compare key wellbeing metrics across all 7 countries	Medium

FR-06	Therapist Access Impact	Compare mental health outcomes for employees with and without therapist access	High
FR-07	Power BI Dashboard	Deliver an interactive dashboard with minimum 5 visuals filterable by work mode, country, and job role	High
FR-08	SQL Analysis Script	Deliver minimum 8 SQL queries with comments, each answering a specific business question	High
FR-09	Gap Analysis Report	Deliver an As-Is vs To-Be document with minimum 6 data-backed recommendations	High
FR-10	GitHub Repository	All documents and scripts organized in a public GitHub repo with a clear README	Medium

6. Non- Functional Requirements

Category	Requirement
Usability	The Power BI dashboard must be usable by a non-technical HR manager without training
Confidentiality	Employee names must remain confidential across any shared dashboard, report, or screenshot
Accuracy	All findings in the Gap Analysis must be traceable to a SQL query or Power BI visual
Accessibility	All documents must be exportable as PDF and the GitHub repo must be publicly accessible
Timeline	Full project delivered within 14 days by a single analyst

7. Assumptions & Constraints

7.1 Assumptions

- The 100-employee dataset is a representative sample of Etheria's 600+ workforce provided under data privacy protocols
- All employees in the dataset have consented to their data being used for this analysis
- The HR Head has authority to implement the recommendations from this project
- Full dataset access may be granted in Phase 2 pending legal and IT approval

7.2 Constraints

- Data set limited to 100 employees thereby findings may not fully represent the complete workforce
- Project delivered within 14 days by a single analyst with no IT support
- Tools limited to free-tier — Power BI Desktop, MySQL Workbench, Jira Server, GitHub

8. Deliverables

Deliverable	Description
Client Brief	Overview of Etheria, the problem, objectives, and scope
BRD (This Document)	Formal requirements document — this file
SQL Analysis Script	12 queries answering key business questions from the dataset
Power BI Dashboard	Interactive dashboard for HR monitoring of wellbeing KPIs
Gap Analysis Report	As-Is vs To-Be comparison with 6+ data-backed recommendations
Jira Project Board	Agile sprint board with Epics, Stories, and subtasks
GitHub Repository	All deliverables with a comprehensive project README

Document Sign-Off
