BUSINESS REQUIREMENTS DOCUMENT

People & Wellbeing Strategy 2026

Prepared by: Business Analyst | May 2026 | Version 1.0

DOCUMENT INFORMATION

Client	Etheria — Phygital Fashion-Tech Brand
Document Type	Client Brief
Project Title	Employee Wellbeing Strategy 2026
Prepared By	Business Analyst
Date	April 2026
Version	1.0
Status	Approved
Classification	Confidential — Internal Use Only

1. Company Overview

Etheria is a fast-growing global tech-fashion company that expanded rapidly post-2020. It combines augmented reality (AR), gamification, and fashion to create immersive shopping experiences. With operations across multiple countries including India, USA, UK, Canada, Australia, Germany, and Brazil, Etheria employs diverse teams of developers, designers, product managers, and data professionals. The brand's name derives from 'Ethereal' and 'Thread', reflecting the belief that every thread tells a story and that clothing is a form of individuality and self-expression. Etheria's tagline, 'Style Beyond Reality,' embodies its mission to empower fashion-forward individuals through immersive, customizable, and gamified experiences.

Brand at a Glance:

- Tagline: "Style Beyond Reality"
- Mission: Empower fashion-forward individuals through AR, gamification, and immersive experiences
- Vision: Lead the fashion industry into a future where style is experienced, created, and shared
- Core Values: Innovation, Community, Sustainability, Self-expression
- Workforce: 600+ employees across 7 countries in Remote, Hybrid, and Onsite arrangements

2. Problem Statement

What began as a digital-first shopping platform evolved into a full-scale phygital ecosystem with AR-enabled applications and physical retail integration. This required employees across different functions to operate in varied work modes: remote for tech teams, onsite for retail operations, and hybrid for management roles. The fragmented work structure, combined with increased workload and coordination demands across time zones, has led to rising burnout, declining mental well-being, and inconsistent productivity across the organization. Despite these warning signals, Etheria currently has no structured data-driven mechanism to diagnose root causes or monitor employee wellbeing at scale.

"Our people are burning out and we don't fully understand why."

— Etheria HR Head, January 2026

3. Project Objectives

Etheria has engaged in this project with the following primary objectives:

01	Evaluate the major cause of burnout — is it working hours or lifestyle habits like sleep and exercise?
02	Analyze the impact of different work modes (Remote, Hybrid, Onsite) on employee mental health
03	Improve employees' productivity and job satisfaction through data-backed recommendations
04	Identify which departments, job roles, and regions have the highest burnout and poorest wellbeing
05	Assess the effectiveness of existing mental health support provisions including therapist access
06	Deliver an interactive HR dashboard for ongoing monitoring of workforce wellbeing KPIs

4. Stakeholders

Stakeholder	Role	Interest in This Project
HR Head	Primary Client / Sponsor	Wants data-driven insights and a clear strategy to reduce burnout and improve wellbeing
HR Executives	Day-to-day Users	Will use the Power BI dashboard to monitor employee health on a monthly basis
Senior Management/CEO	Decision Makers	Will review and approve the final People Strategy recommendations
Department Managers	Secondary Stakeholders	Will receive team-level recommendations and be responsible for implementing changes
Tech Employees	Data Subjects	Their wellbeing data forms the basis of this analysis; they benefit from improved policies
Business Analyst	Project Executor	Responsible for analysis, documentation, and delivering all project outputs

5. Project Scope

5.1 In Scope

The analysis will focus on the following areas:

- Work mode (Remote, Hybrid, Onsite) and its effect on employee wellbeing
- Mental health status and burnout levels across departments and job roles
- Productivity scores and work-life balance ratings
- Lifestyle factors — sleep hours per day and exercise frequency
- Country-wise wellbeing trends across all 7 regions
- Access to therapist / mental health support and its impact on outcomes
- Remote infrastructure quality — internet issues and setup satisfaction

5.2 Out of Scope

The analysis will not cover the following:

- Financial performance, revenue, or sales-related metrics
- Customer behavior, shopping patterns, or marketing performance
- Store design, layout, or customer in-store experience
- Payroll, compensation benchmarking, or salary analysis
- Recruitment, hiring, or onboarding process evaluation
- External factors not captured in the dataset

6. Constraints & Assumptions

6.1 Constraints

- The dataset covers 100 employees and may not represent Etheria's full workforce of 600+ employees
- The project must be delivered within a 14-day timeline by a single analyst
- No budget allocated beyond free-tier tools — Power BI Desktop, MySQL Workbench
- Employee names in the dataset must remain confidential throughout

6.2 Assumptions

- The dataset provided accurately represents the wellbeing trends across Etheria's tech workforce
- All employees whose data appears in the dataset have provided informed consent for its use
- The HR Head has organizational authority to implement recommendations arising from this project
- Job roles in the dataset — DevOps, QA, UI/UX, Data Scientist, Developer, Product Manager, represent Etheria's core tech team

7. Deliverables

#	Deliverable	Description
1	Client Brief	Overview of Etheria, the problem, objectives, scope, and stakeholders
2	Business Requirements Doc (BRD)	Formal document detailing all functional and non-functional requirements
3	SQL Analysis Script	8-10 queries answering key business questions from the employee dataset
4	Power BI Dashboard	Interactive dashboard for HR monitoring of wellbeing KPIs
5	Gap Analysis Report	As-Is vs To-Be process comparison with actionable recommendations
6	Jira Project Board	Agile project tracking with Epics, User Stories, and Tasks
7	GitHub Repository	All documents, scripts, and a comprehensive project README case study

8. Success Criteria

This project will be considered successful when the following outcomes are achieved:

- HR team can clearly identify which work mode, job role, and region has the highest burnout
- The root cause of burnout — hours vs lifestyle — is clearly identified with data evidence
- At least 6 data-backed, actionable recommendations are delivered to the HR Head
- A Power BI dashboard is delivered that a non-technical HR manager can use without training
- All documents are professionally formatted and available on the GitHub repository
- Jira board reflects a realistic Agile plan covering all deliverables

Document Sign-Off

By signing below, stakeholders confirm this Gap Analysis, and recommendations are approved for implementation planning.
